16400-15510 Aluminum Car Radiator for Automotive Cooling System Direct Fit Replacement For Toyota Corolla

Our Product Introduction

For more products please visit us on automobile-sparepart.com

Basic Information

- Place of Origin: CHINA
- Brand Name: NABO
- Certification: TS16949
- Model Number: 16400-15510
- Packaging Details: poly bag or air bubble bag, any boxes with customers' label, Corrugated box , Standard tray
- Delivery Time: 3-35 days
- Payment Terms: D/P, L/C, T/T

Product Specification

- Warranty: 12 Months
- Country Of Origin: China
- Type: Car Radiator
- Name: Automobile Spare Parts
- Size: Standard
- Material: Aluminum

Product Description

Product Description:

A vehicle's cooling system relies heavily on the integrity of the car radiator. The radiator is an indispensable component that promotes engine efficiency by managing the temperature within the engine block.

The typical car radiator has a core consisting of narrow, metal tubes that are connected to the inlet and outlet tanks. The core walls are thin and often made of aluminum because aluminum is a good heat conductor. The tanks, on the other hand, are generally made of plastic or aluminum.

The main role of the car radiator is to cool the engine by drawing heat away from the coolant circulating through the engine and dissipating it into the air. This process involves a trifecta of factors—conduction, convection, and radiation—to ensure the engine stays at optimal operating temperature.

Features:

Our Car Radiator is designed with efficient heat dissipation in mind. It features a high-density core made up of thin metal tubes and cooling fins, which maximizes the surface area for heat transfer. This allows for the effective dissipation of heat generated by the engine, ensuring that the coolant flows through the radiator at an optimal temperature to maintain the engine's performance.

Our radiator is built to be durable and long-lasting, providing excellent heat conductivity and resistance to corrosion. This is due to its sturdy aluminum core, which complements the high-quality materials used in the inlet and outlet tanks. The result is a radiator that can handle the demands of daily driving with ease, ensuring consistent performance and cooling efficiency. We take pride in the enhanced cooling performance of our Car Radiator, which is the result of optimizing the design of tubes, fins, and coolant flow paths. This ensures that the engine remains at a safe and consistent temperature, minimizing the risk of overheating and potential damage. It helps prolong the life of your vehicle while ensuring optimal performance.

Quality assurance is a top priority for us, and our Car Radiators undergo strict quality control testing to ensure that they meet the highest standards of reliability and performance. These tests are designed to assess cooling efficiency and durability, giving you confidence in the quality of our product.

Our Car Radiators come with a warranty, providing our customers with peace of mind. This warranty is a testament to our commitment to quality and our belief in the performance and durability of our product. In the unlikely event that any manufacturing defects or faults develop, we are ready to back up our product with a warranty.

Applications:

Looking to improve the cooling performance of your vehicle and optimize its engine temperature? Look no further than our premium Car Radiator. Featuring top-of-the-line construction and dependable operation, our Car Radiator is the perfect upgrade to keep your engine running at its best.

With our Car Radiator, you can trust in the superior durability and efficiency of our top-quality materials and construction. Our radiator is designed to last and provide reliable operation throughout the lifespan of your vehicle.

By upgrading to our Car Radiator, you can enjoy enhanced cooling performance that will keep your engine running smoothly and prevent overheating. This will not only help your vehicle perform better, but also help prolong its lifespan and save you money on repairs.

Benefits of our Car Radiator:

Enhanced cooling performance

Optimal engine temperature

Dependable and reliable operation

Durable construction

Efficient design for maximum performance

Prolongs the life of your vehicle

FAQ:

1. Who are we?

We are based in Guangzhou, China, start from 2018, we are specilizing in all kinds of spare parts for Japanese cars and Korean cars, for example, engine parts, suspension parts,electric parts, steering parts,transmission parts, body parts. . .

2. How can we guarantee quality?

Always a pre-production sample before mass production;

Always final inspection before shipment.

3. Why should you buy from us from other suppliers?

We have experience in spare parts for more than 10+years

A large of stock

Professional export company

Accept small order

We can design anything well according to customers' requirment
